SUMMARY

Computer Science graduate (**First Class Honours**, AI & Machine Learning) and Associate Software Consultant in banking technology. I build machine-learning systems end to end and load-test large banking systems. My graduation project, **Pawlytics**, combines text, audio and image AI models in one product. 21 public projects on GitHub.

EXPERIENCE

Associate Software Consultant · Qestit

Dec 2025 – Present

- Created and ran **Apache JMeter** load tests for a bank's **Temenos T24** core-banking upgrade, covering browser, API and ATM channels and the close-of-business batch.
- Checked every test step against agreed response-time and error limits and documented the causes of failures.
- Wrote the performance closure reports for client management.
- Automate **Temenos T24** banking workflows with **Playwright** to re-check critical screens after every release.

PROJECTS

Pawlytics · Multimodal AI pet-health assistant · graduation project

🐙 ziadelh/pawlytics

PyTorch · TensorFlow · Hugging Face · Flask · Node.js · MongoDB

- Three deep-learning models in one app: text (Bio_ClinicalBERT, **63.8%**), audio (YAMNet, **71.9%**) and image (EfficientNet-B0, **73.2%**), all measured on unseen test data.
- Built the data pipelines: ~24.8k images from 20+ sources, 51,841 health records split by dog (no leakage), 953 audio clips.
- Shipped as a web app: Node.js, Express and MongoDB, a Flask AI service, and a rule-based step that merges the results into one report.

Evolutionary robotics · Creatures that learn to climb

🐙 ziadelh/...mountain-climbing-creature

Python · PyBullet · Genetic algorithms

- Genetic algorithm that evolves robot bodies and behaviour in a physics simulator (PyBullet): tree-shaped genome, a fitness score for climbing height and stability, and tournament selection.

Traffic car tracking · Count cars in traffic video

🐙 ziadelh/traffic-car-tracking

Python · OpenCV · Kalman filters

- Classical computer-vision pipeline: frame differencing, background subtraction and Kalman-filter tracking.
- Car counts match a manual count on both test videos.

More on GitHub: fake-news detection (97%), loan approval, house prices, speech recognition.

TECHNICAL SKILLS

AI & ML	PyTorch, TensorFlow/Keras, scikit-learn, Hugging Face Transformers, OpenCV, NLP, computer vision, audio ML
Data	Python, SQL, pandas, NumPy, Matplotlib, Jupyter, MongoDB, MySQL, SQLite
Software	Node.js, Express, Flask, REST APIs, JavaScript, C++, C#, Git, Docker (basics)
Testing	Apache JMeter, Playwright, performance testing, test automation

EDUCATION

BSc Computer Science **First Class Honours**

Graduated Sep 2025

University of London · academic direction: Goldsmiths

Specialisation: Artificial Intelligence and Machine Learning · Final project: Pawlytics

Key modules: Machine Learning, Neural Networks, Natural Language Processing, Data Science, Intelligent Signal Processing, Databases, Algorithms

LANGUAGES

Arabic	Native
English	Fluent
German	Learning
